

Transportation Management

PSItms - Transport Execution and Management

Complete control from transport handover to notification of execution.

Visualize your entire transport chain and keep track of everything and under control. Every scan, every event, every exception is visualized and provided to the dispatcher for a smooth transport process.

Functions

- + Monitoring of driving corridors as well as any misloading
- + ETA calculation with traffic data (estimated time of arrival)
- + Alarming via various communication channels
- + Monitoring of time windows for compliance with SLAs
- + Driving order to service providers/drivers
- + Transport documents (electronic, via app or printed)
- + Loading lists and loading control
- + Track-and-trace
- + Recording of incidents
- + Tracking via app, vehicle telematics or IoT sensors

Would you like to have easy and full control over your transports?

We provide accurate performance data for billing and proof of service level agreements. Exceptions are documented and classified according to areas of responsibility. Real-time detection of deviations, combined with AI-based deviation forecasting, enables early identification of pro-

blems - and therefore often problem resolution. Need for action in terms of reordering, redispaching or notification are reported to the players at an early stage. In addition, solutions are proposed to the dispatcher considering costs, revenues or SLA.

Facts

- + Full app support
- + Telematics integration
- + Live monitoring
- + EPCIS standard
- + Interfaces to your partner systems

Your benefits

- + Efficient process support through the right information in the right place
- + Complete transport and performance documentation
- + Exact ETA calculation and notification
- + Automatic detection of deviations and escalation
- + Early identification of problems
- + Track-and-trace at order, container, vehicle levels
- + Empties management for recording empties and empties needs
