

Transportation Management

PSItms - Transport Execution Using the Driver App

Mobile apps for efficient operation. The mobile order execution for your transportation management system

Put optimized planning on your roadmap, thus activating the potential for cost savings, efficiency gains, and quality stability. All relevant information for delivery, pickup and individual service features for the customer order guide the user through order processing per location on the end device.

Functions

- + Scan during loading and unloading/consolidation scan
- + Event-based real-time information
- + Order list for mobile order management
- + Upload of documents
- + Collection of images for performance or damage documentation
- + Integrated sign-on-glass function for performance documentation
- + Track-and-trace
- + Vehicle and driver tracking

How important is ergonomic, error-free and efficient transport execution to you?

Highly important? For us as well! That's why we support you and leave nothing to chance. The driver app supports and monitors the entire process of transport handling in one app. For optimal integration of subcontractors, we have a fully digital onboarding process and apps that run on all relevant devices.

The driver app gives your transport partners and drivers easy access to the system. It supports scanning and track-and-trace processes in an order-centered view of your transports. Drivers, letter carriers or parcel delivery staff can document their tasks in a highly efficient manner with minimal system interaction and automatically transmit them to PSItms.

Facts

- + Progressive web app for Android + iOS
- + Offline capable with background synchronization for a secure information flow
- + Integrated location services with access to embedded navigation
- + Simple operation and handling
- + Empties management for collecting empties and empties requirements

Your benefits

- + Trouble-free change of drivers and routes due to simple identification
- + Order list with aggregated order information for efficient work
- + Scan list with automatic job and order assignment for minimal user interaction
- + Leasing option for industrial scanners and "bring your own device" option for easy operation
