# Intelligent Grid Control for Power Supply and Gas Distribution

Source: Shutterstock

Optimized dispatching for complex networks via automated decision support balancing technical requirements and economic goals

- + Automated assessment of dispatching alternatives
- + AI based learning of operator expertise
- + High quality of decision-making with competing objectives in dynamic settings
- + Improved and efficient grid dispatching based on adjustable KPIs
- + PSIGassuite enhanced by Deep Qualicision for grid control and monitoring
- + Deep Qualicision for transparency in Intelligent Distribution Grids
